

## Editorial

This volume appears after a year of halted activities by the Covid-19 pandemic, during 2020. A pandemic that has hit some members of the Editorial Board, reviewers and authors. Thanks to goodness, we have so far no deaths to report. Apparently, we all are destined to share the pleasure and joy of survival.

I wish to cease this opportunity to reinvite potential authors to contribute more to this journal. For new authors, do not overlook please to ask yourself the following questions before you submit your work to us for evaluation.

- Have you done something mathematically or numerically new?
- Is there anything challenging in you work?
- Will your obtained results influence other researchers in the field?
- Have you provided theoretical or computational solutions to some outstanding problem?

If you can answer "yes" to some or all of the above questions, then it is good time to share your research and to make your submission to us. Such a "yes" should ensure that your work has the best chance of acceptance for publication in *JNM@S*.

By this volume, we resume the valued service of *JNM@S* to the numeric mathematical-stochastic community worldwide.
